

Silent Gliss Pli-sol and Duette

Inspiration

Silent Gliss Pli-sol – window fashion styles for every season

An elegant and comfortable interior requires perfect sunshading. With our Pli-sol and Duette systems you will have a full programme of models and fabric alternatives to choose from for ensuring an ideal solution for your interior.

Shading for privacy

Use transparent or dim-out fabrics for different uses, privacy or for a better view from your living room. With the large programme of fabrics with several degrees of shading effect you will achieve the perfect atmosphere for your home.

Shading for the perfect indoor climate

You can easily control the brightness and the temperature of a room.

Our systems are easy to operate for protecting your furniture or your plants from strong daylight. Many fabrics have an aluminium backing for maximum shading effect.

Different shapes and functions

The Silent Gliss Pli-sol and Duette models provide good solutions for all kinds of window shapes, whether they are rectangular or have an irregular shape.
Operation possibilities: Handdrawn, crank, motor with a wall switch or remote control.

Allow for daylight – but close for privacy when needed. The system can be adjusted to any height, at the bottom, top or in the middle of the window.

Operation of your pli-sol

Cord

Pull-grip

Chain

Motor – remote control

A perfect dimout solution for an after-dinner nap – or efficient sunshading in the childrens room. The large fabric assortment provides plenty of possibilities.

Day & Night model

Efficient shading with a light but dense fabric providing comfortable light conditions in the room during daytime – and at the same time ensuring privacy. In the same system you will have an additional dim-out fabric for night-time use.

Silent Gliss Pli-sol is an excellent product for wintergardens – every individual window frame can be covered. The Pli-sol systems offer small stacking dimensions to allow for maximum sunlight. The choice of fabric is vital for the function and comfort as well as for the atmosphere of the room. An additional benefit for northern climates – window coverings prevent the heat from escaping during the cooler months.

Fabrics

The Silent Gliss Pli-sol and Duette collections include a number of functional and decorative fabrics of high quality. Different patterns and 3d-structures give stunning effects. The shape of the pleated blind is very stable and it will always fold back to the original position.

The special shape of the Duette provides an elegant look.

Transparent fabrics

These fabrics will reduce strong sunlight and allow outward visibility. Viewing into the room from the outside is possible.

Semi-transparent fabrics

Semi-transparent fabrics block strong sunlight but still allow for light coming into the room, depending on the colour of the fabric. Strong colours block out more light than bright colours.

Dim-out fabrics

Dim-out fabrics are used in bedrooms, conference rooms and in all locations where complete dim-out is needed.

Maintenance

The Silent Gliss Pli-sol and Duette fabrics require very little maintenance. Many of them are treated to be repellent to dirt and moisture.

Topar and Topar Plus

Without Topar® Plus

With Topar® Plus

- repellent to water and oil-based liquids (Topar Plus)
- protect the fabric against dirt
- repellent to dust, washable
- not sensitive to moisture, dirt from insects or alkalic substances
- simple to clean ensures long life
- both sides of fabric are treated

Dustblock

Without Dustblock™

With Dustblock™

- repellent to dry dirt like dust and smoke particles
- repellent to water and oil-based liquids
- simple to clean ensures long life
- both sides of fabric are treated

Fire retardant fabrics

For contract situations, fabrics with fire retardant characteristics are an absolute necessity, for private homes these fabrics offer added security. The Pli-sol and Duette collections contain several fabrics which are fire retardant according to DIN 4102 B1.
